

Invest-Trade Group Ungarn: SAP Implementation

The customer

Founded in Miskolc (Hungary) in 1991, Invest-Trade Group is one of the largest companies in Hungary's meat industry. In addition to its pork, beef and meat processing operations, the group also produces fruit juices and carbonated drinks, is active in the sand and gravel industry, and develops real estate.

The challenge

Until recently all of the members of the group operated independent IT systems. The rapid development of the business required the implementation of an integrated ERP system. Invest-Trade's subsidiaries had customized IT systems and were operating in isolation. This not only made it hard to handle business data, but also to review the activities of the enterprise. Ultimately it slowed down decision making processes. Through the implementation of ERP Invest-Trade wanted to realize the integrated management of the subsidiaries within the group, along with the application of the best business practice.

The project

S&T Hungary implemented a custom solution for the Invest-Trade Group based on mySAP All-in-One. The solution is tailored to the specific requirements of the customer and can adapt to change flexibly. The following modules were installed for the Invest-Trade Group: Finance, Asset Management, Materials Management, Sales and Distribution, and Controlling. Additionally, the Production Planning module was implemented at the four production sites. Because the requirements of all four production facilities were so different, modifications were made so that three separate production models were implemented. A particular challenge that had to be met was the necessity to automate the integration of the weights of meat — essential to efficient meat processing — into the SAP system in order to avoid the manual input of such data. For these purposes S&T together with its partners developed a customized data communication system that would be reliable over the large distances between production facilities.

Benefit for the customer

- improved and faster handling of business data
- integrated systems
- individual solution

"The members of our group of companies are geographically distributed from each other and their business operations are as diverse as their locations. However with the implementation of mySAP All-in-One, we are now able to ensure that accurate, up-to-date and integrated data is available to our company headquarters. This has significantly enhanced the efficiency of our operations and management."

Illés Szabolcs Dudás, Head of Finance und Joint Owner, Invest-Trade Ltd.

S&T Ungarn

After the foundation of S&T Hungary as part of S&T in 1999, in 2001 S&T took over the INNET kft. in Hungary, followed in 2003 with the take over of Fujitsu Siemens' hungarian branch office. 2006 S&T bought with UNITIS one of the market leaders in the Business Solutions segment, also for SAP ERP systems. UNITIS provides customised standard solutions and tailor-made software developments to companies and government departments in Hungary and other countries. These range from systems for enterprise resource plan and facility management to information and communication instruments to engineering software.

S&T Hungary belongs to the S&T Group, which, with more than 3,100 employees in 22 countries and annual sales in 2007 of 522,2 million Euro, is the leading provider of IT consultancy, solutions and services for customers in Central and Eastern Europe, in the Germany-Austria-Switzerland (DACH) region and in China and Japan.
